

MAOP **Exercises**

Summer School on AI for Industry 4.0
Saint-Etienne 2020

Inference

- What is printed?
- Use a rule
- Find all solutions for the plan context
- Ask another agent for some beliefs, if necessary (implementing memoization)

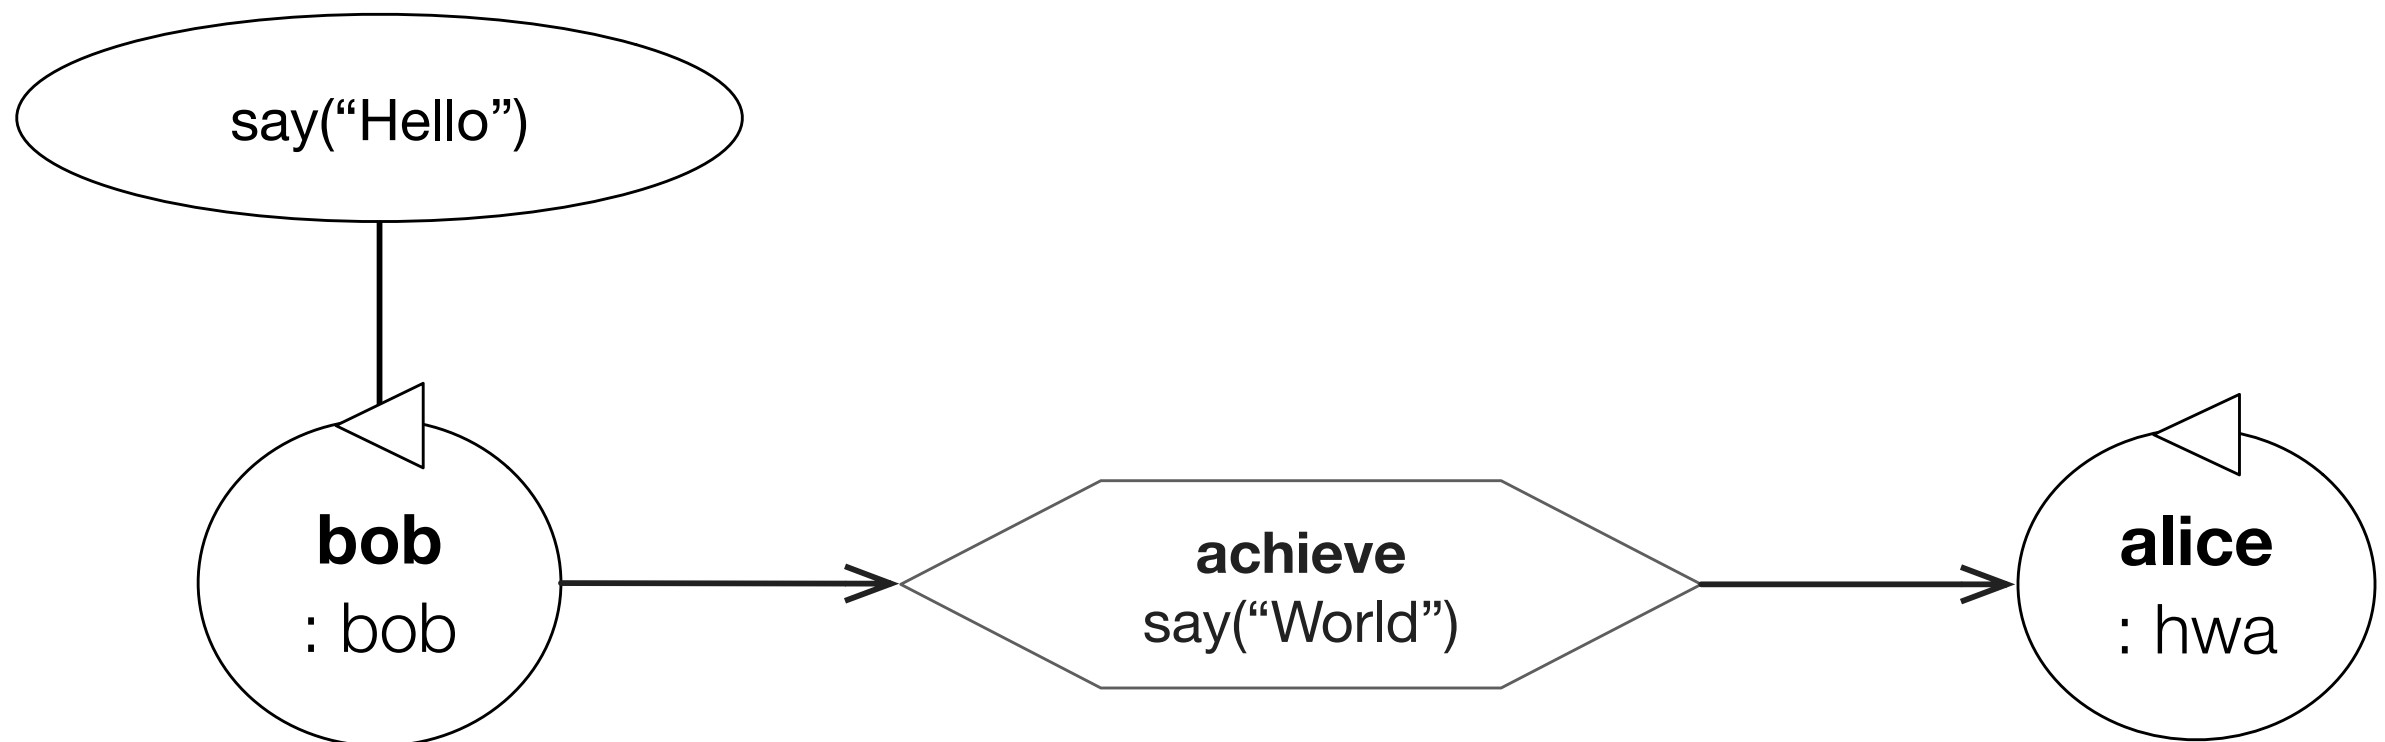

```
b(10).  
b(20).  
p(15).  
p(25).  
  
!bt.  
  
+!bt  
  : b(X) &  
    p(Y) &  
      X > Y  
    <- .print(X).
```

Coordination

- Two agents, Bob and Alice, have to print out

Hello World

- Bob have to print “Hello” and
Alice “World”
- Use communication for coordination

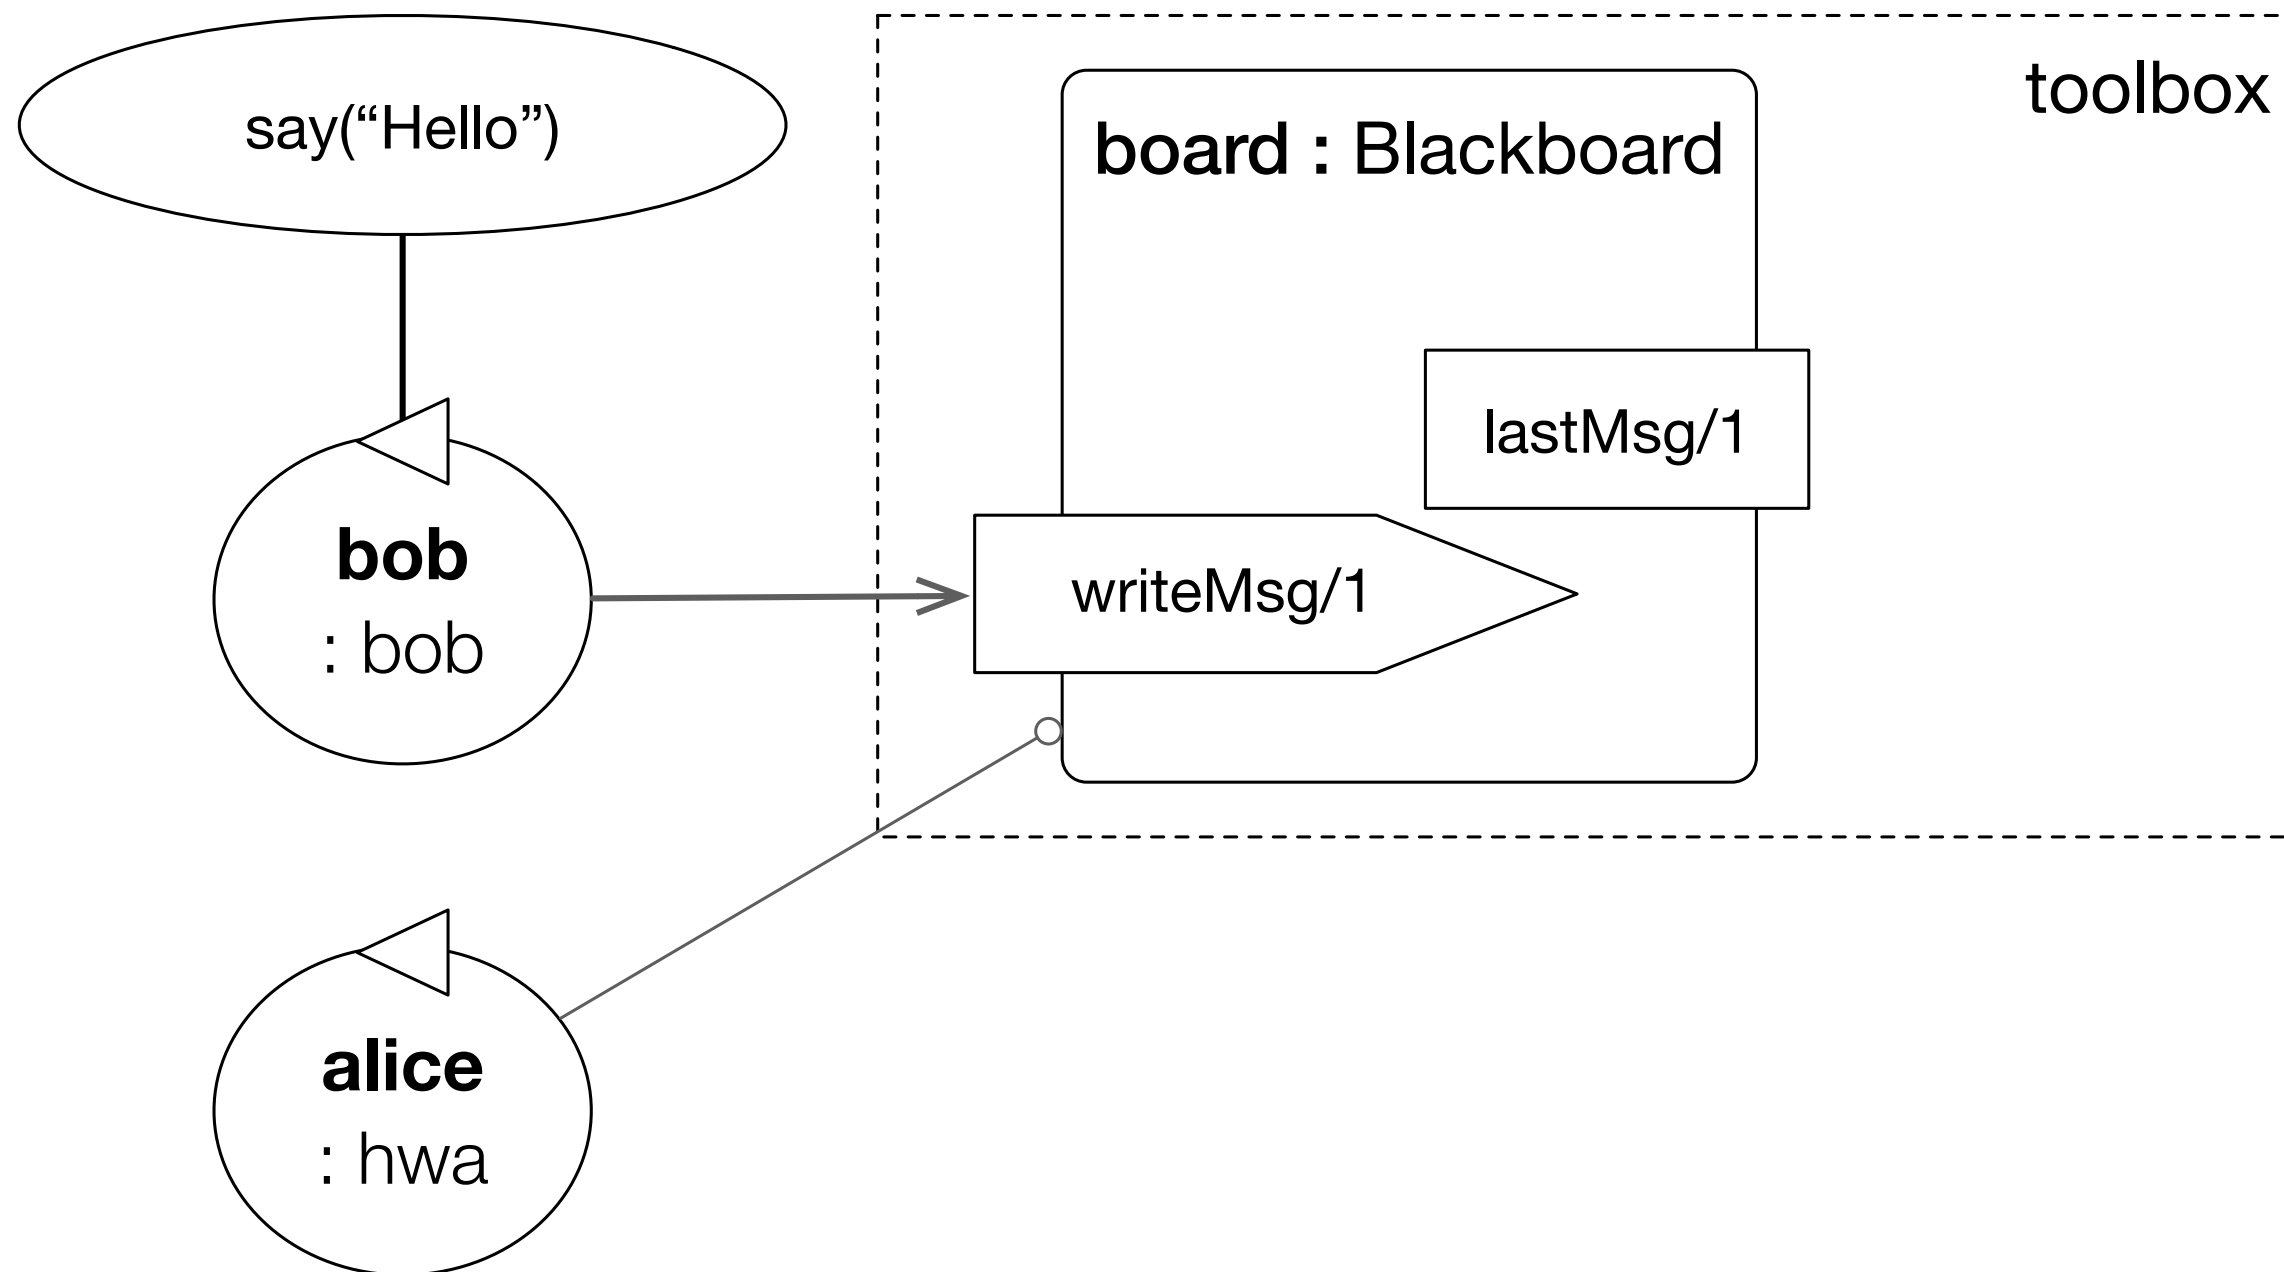

Characteristics

- agents have to know each other
- can be complex for several agents
- not easy to implement complex dependencies

Environment Hello World

- We have an artifact where to print, that notifies agents about what is being printed
- Bob & Alice can interact only with this artifact!
(loosely coupled)

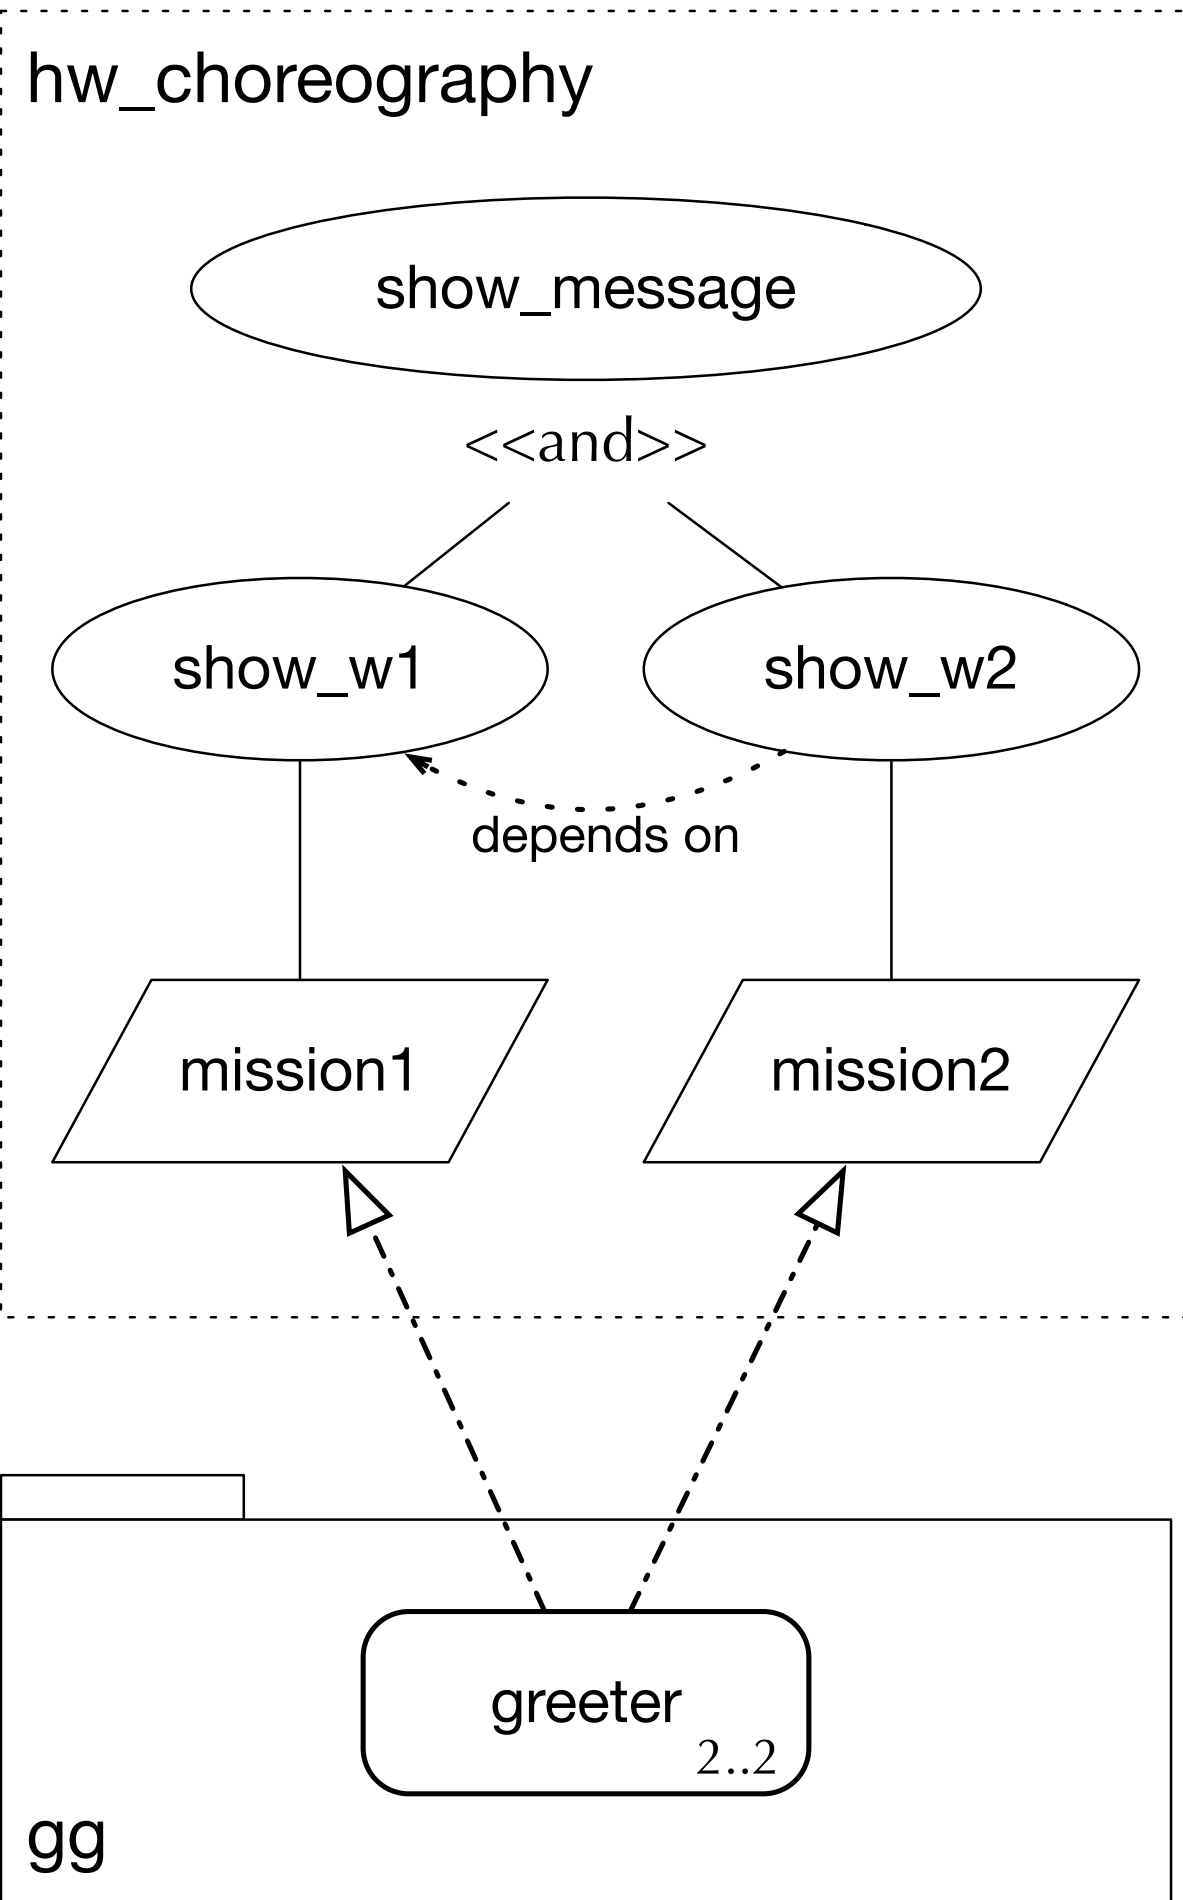

Characteristics

- agents do not need to know each other
- not easy to implement complex dependencies

Organised Hello World

- We have a scheme with goals assigned to Bob and Alice

Exercises

- Change its application to print

World Hello

- and measure the effort for that
